- **Main title:** Peter Pizzeria
- **Subtitle:** Repositioning Strategy for 18–30 Audiences
- **Project information:** University Marketing Consultancy Project · Individual Project · Academic Result: Distinction

Introduction: Peter Pizzeria is an independent Neapolitan-style pizzeria operating across Leicester, Loughborough and Nottingham. This project explored how the brand could improve its relevance and performance among customers aged 18–30 without undertaking a complete rebrand.

I analysed customer experience across the three locations, evaluated the brand's Instagram and TikTok activity and benchmarked its content against brands that communicate effectively with younger audiences. I then translated the findings into location-specific recommendations, proposed KPIs and a phased 12-month implementation plan.

3. Project snapshot

- 113 customer reviews analysed
- 20 Instagram and TikTok posts audited
- 3 restaurant locations compared
- 3 competitor brands benchmarked

4. The Challenge

Peter Pizzeria had a clear and appealing core proposition: Neapolitan-style pizza served in a casual local environment at accessible prices. However, customer experience and brand perception varied significantly between locations.

The main challenge was to determine whether the brand required a complete repositioning or whether focused improvements to operations, social media content and customer communication would be sufficient to strengthen its appeal among customers aged 18–30.

5. My Contribution

I independently designed and completed the research process, analysed the findings and developed the final recommendations.

- Social media auditing
- Customer review coding and sentiment analysis
- Competitor benchmarking
- Secondary market research
- Data interpretation and visualisation
- Strategic recommendation development
- Implementation and KPI planning
- Report writing and presentation

6. Research Approach

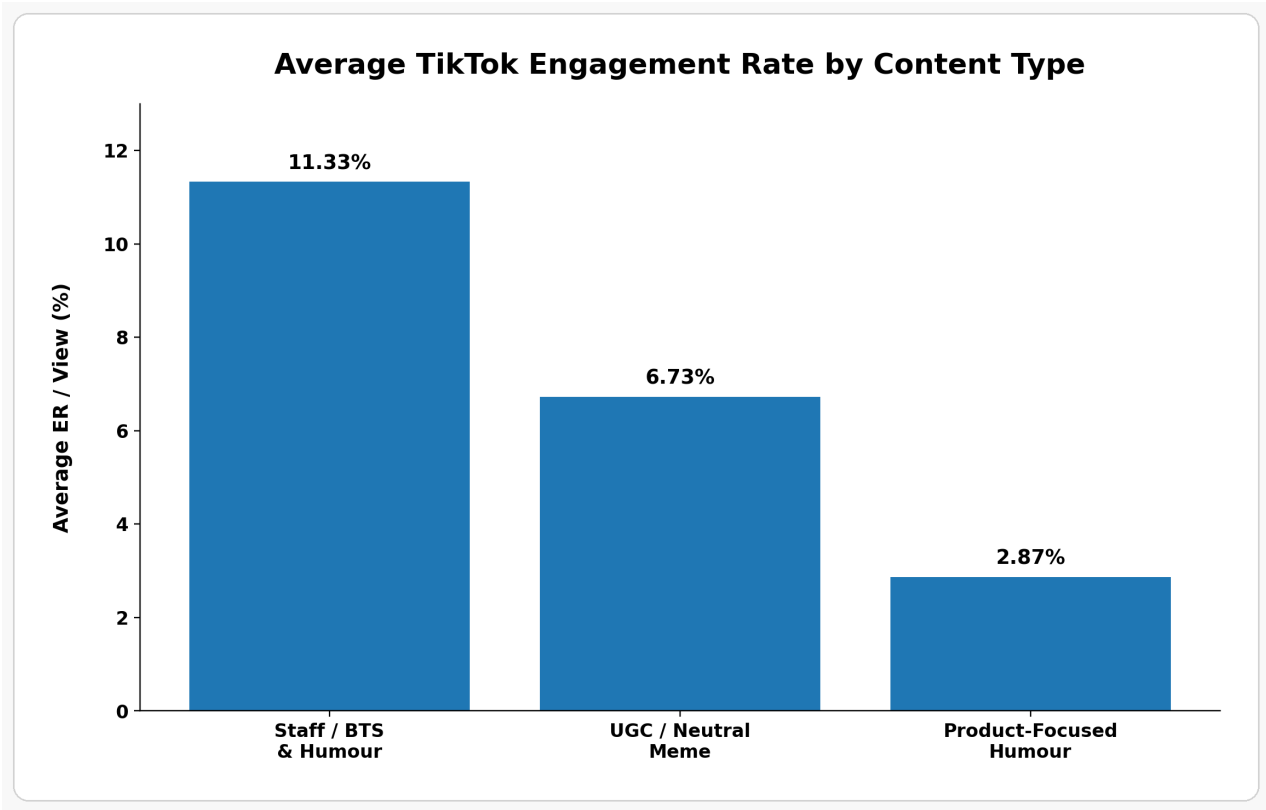

I used a mixed-methods approach to combine quantitative performance indicators with qualitative customer and content insights.

- **Social Media Audit:** I analysed ten recent TikTok posts and ten Instagram posts, evaluating content format, tone of voice, originality, call-to-action clarity, visual quality and engagement.
- **Customer Review Analysis:** I coded 113 TripAdvisor reviews from Leicester, Loughborough and Nottingham. Reviews were categorised by themes including food quality, service, atmosphere, speed, value and delivery.
- **Competitor Benchmarking:** I compared Peter Pizzeria with Zizzi, Honest Burgers and Rhode to identify transferable approaches to people-led content, visual consistency and Gen Z communication.
- **Secondary Research:** I used academic and industry research to place the findings within wider patterns in Gen Z dining behaviour, social media use and hospitality marketing.

7. Key Findings

Finding 1: People-Led Content Generated Stronger Engagement

Staff, behind-the-scenes and humour-led TikTok posts achieved an average engagement rate of 11.33%. Product-focused humour achieved only 2.87%, showing that younger audiences responded more strongly to content built around people, personality and everyday restaurant life.

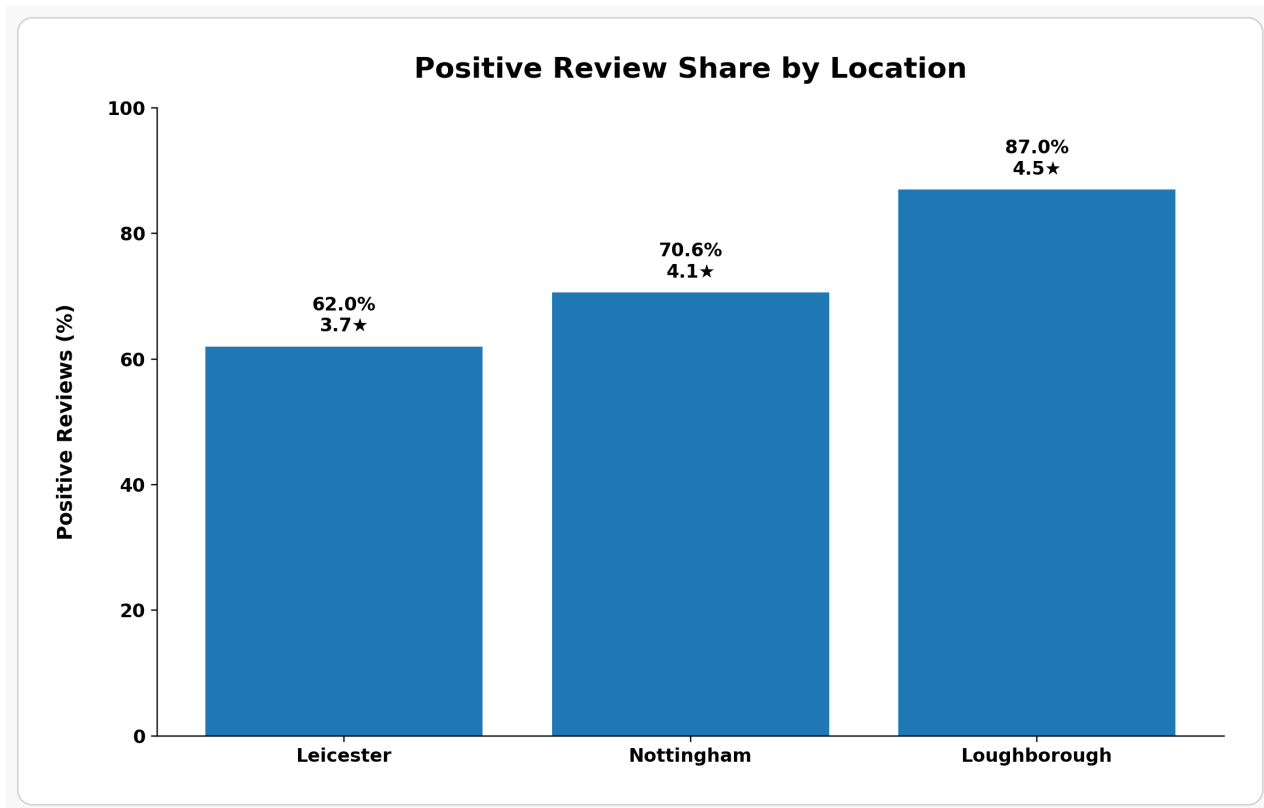

Place this chart directly under Finding 1.

Finding 2: Customer Experience Varied by Location

Loughborough was the strongest-performing location, with a 4.5-star average and 87% positive recent reviews. Leicester was the weakest, with a 3.7-star average and 62% positive reviews, particularly affected by concerns about quality and value.

Nottingham performed between the two locations but showed recurring problems with waiting times, delivery and collection.

Place this chart directly under Finding 2.

Finding 3: Digital Communication Lacked Consistency

Instagram content varied in tone, visual quality and call-to-action clarity between locations. TikTok occasionally generated strong reach, but two-way dialogue remained limited.

Across the ten analysed TikTok posts, the average was only six comments per post, and three posts received no comments. This suggested that the brand was broadcasting content rather than consistently building an active community.

8. Strategic Recommendations

Strategic Recommendations

Three practical priorities developed from the Peter Pizzeria analysis.

1

Stabilise quality and value perception in Leicester

- Use Loughborough as an internal benchmark.
- Review kitchen processes and food consistency.
- Make value clearer through the menu and promotional offers.

2

Improve speed and delivery in Nottingham

- Review busy-period workflow and waiting times.
- Improve delivery standards and packaging.
- Track speed- and delivery-related complaints monthly.

3

Develop a people-first social media strategy

- Prioritise staff, guest and behind-the-scenes content.
- Use stronger calls to action and comment prompts.
- Differentiate content more clearly by location.

Place this image at the beginning of the Strategic Recommendations section.

Summary: The strategy focused on three priorities: improving quality and value perception in Leicester, addressing speed and delivery problems in Nottingham and developing a more consistent people-first social media strategy across all locations.

9. 12-Month Implementation Roadmap

Add this sentence above the image: The recommendations were organised into three phases to make implementation realistic for a regional hospitality business.

12-Month Implementation Roadmap

A phased plan for operational improvements and social media development.

1

0-3 Months Set the Foundations

- Review operational standards.
- Define three or four content pillars.
- Create a tone-of-voice guide.
- Nominate staff responsible for capturing content.
- Publish two TikToks and two Instagram posts each week.

2

3-6 Months Standardise and Differentiate

- Clarify Leicester's value proposition.
- Improve Nottingham's delivery workflow.
- Create location-specific social media formats.
- Reuse successful TikToks as Instagram Reels.
- Track reviews, comments, saves and shares.

3

6-12 Months Scale What Works

- Transfer successful practices between locations.
- Collaborate with local creators and student groups.
- Refine content pillars using performance data.
- Compare ratings and sentiment against the original benchmarks.

Place this image under the roadmap heading.

10. Proposed KPIs

- Publish at least two TikToks and two Instagram posts per week.
- Ensure that at least 50% of monthly content features staff or guests.
- Increase TikTok engagement and Instagram saves and shares by 20–25%.
- Increase average comments per post from six to at least 15.
- Respond to all comments within 24 hours.
- Increase Leicester's rating from 3.7 to at least 4.1.
- Increase positive pizza sentiment in Leicester from approximately 60% to at least 75%.

Important: call this section Proposed KPIs, not Results.

11. Project Outcome

The project transformed a broad repositioning question into an evidence-based and practical strategy.

Rather than recommending a costly full rebrand, I identified specific operational and communication changes that could be introduced gradually across the three locations.

The project demonstrated my ability to organise complex information, identify commercially relevant patterns and translate research findings into realistic recommendations, implementation stages and measurement criteria.

12. Supporting Materials

Place this section at the bottom of the Peter Pizzeria page.

- **Button 1:** Download Case Study PDF
- **Button 2:** View Full Consultancy Report
- **Button 3:** Watch Strategy Presentation

Supporting Materials intro: Explore the project in more detail through the visual case study, complete consultancy report and recorded strategy presentation.

13. Final contact section

Heading: Interested in Working Together?

Text: I am interested in opportunities involving marketing research, social media, content strategy and digital storytelling.
