Repositioning Peter Pizzeria for 18-30 audiences

Independent research and strategy report

Academic result: Distinction

Hospitality marketing

Peter Pizzeria is an independent Neapolitan-style pizzeria operating across Leicester, Loughborough and Nottingham. This project examined how the brand could improve its relevance among trend-aware customers aged 18-30 without undertaking a complete rebrand.

I connected social media performance, customer reviews and competitor content to develop location-specific priorities, a 12-month roadmap and proposed measurement criteria.

Instagram and TikTok posts audited

3

locations and competitor benchmarks

01 • THE BRIEF

Diagnose the real barrier to younger-audience growth.

The central question was whether Peter Pizzeria required a broad repositioning or whether more focused changes to operational consistency, content and customer communication would be sufficient.

18-30

Primary audience

3

Regional locations

4

Research streams

12 mo.

Implementation horizon

A mixed-methods approach.

I combined platform data with qualitative customer and market evidence, then triangulated the findings to avoid relying on a single source.

Research approach

A mixed-methods design connected platform performance, customer experience and market context.

01

Social media audit

10 recent TikToks and 10 Instagram posts scored for format, tone, originality, CTA clarity and visual quality.

02

Customer review analysis

113 TripAdvisor reviews coded by location, sentiment and themes including quality, service, value, speed and delivery.

03

Competitor benchmarking

Zizzi, Honest Burgers and Rhode compared for people-led storytelling, visual consistency and platform adaptation.

04

Secondary research

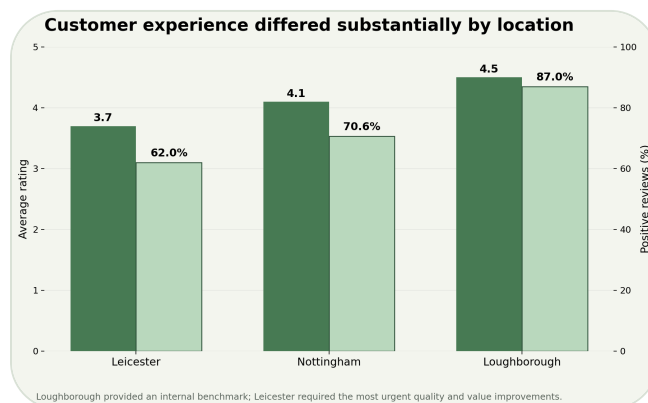

Academic and industry sources used to contextualise Gen Z dining behaviour and social media expectations.

03 · CUSTOMER EXPERIENCE

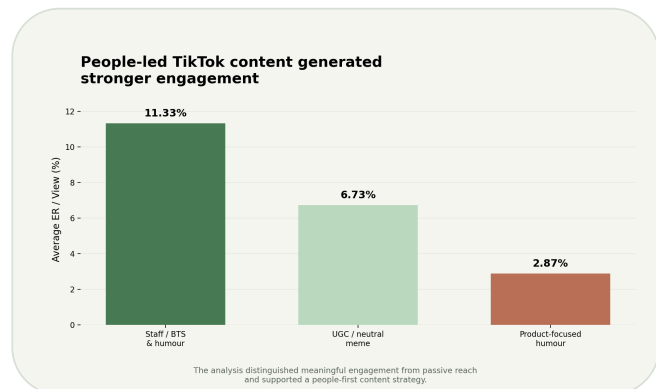

The same brand produced very different location-level outcomes.

Loughborough acted as an internal proof of concept. Leicester showed the most urgent quality and value problems, while Nottingham's weakness centred more on speed, delivery and collection.

The comparison used descriptive review data; it was intended to identify commercially useful patterns rather than claim statistical significance.

People and personality outperformed product-only content.

Staff, behind-the-scenes and humour-led content generated substantially stronger average engagement than product-focused humour. The finding supported a people-first content system rather than a feed dominated by generic food imagery.

The audit also found weak two-way dialogue: across the ten TikTok posts, the average was six comments per post and three posts received no comments.

Transferable patterns from brands that communicate clearly.

Zizzi, Honest Burgers and Rhode were used as direct, indirect and aspirational references. The purpose was to isolate useful principles rather than imitate execution.

Competitor benchmark

The purpose was not to copy competitors, but to identify transferable content principles.

ZIZZI

People-led humour

Observed pattern

Bright food imagery, expressive reactions and playful staff content.

Implication for Peter

Use bolder personality and show people enjoying the product.

HONEST BURGERS

Food-first storytelling

Observed pattern

Professional close-ups combined with simple meme-style copy.

Implication for Peter

Pair polished food assets with straightforward, playful captions.

RHODE

Aspirational visual world

Observed pattern

Consistent lifestyle aesthetics with more relaxed UGC-style TikTok execution.

Implication for Peter

Create a recognisable visual system, then loosen it for TikTok.

Focused change instead of a complete rebrand.

The final strategy prioritised the most commercially relevant issue at each location and created a repeatable content system across the group.

Three strategic priorities

The evidence did not support a complete rebrand. It supported focused operational and communication changes.

1

LEICESTER

Stabilise quality and value

Use Loughborough as an internal benchmark, review kitchen processes, standardise preparation and make value cues clearer.

2

NOTTINGHAM

Improve speed and delivery

Review busy-period workflow, strengthen delivery standards, communicate realistic waiting times and track recurring complaints.

3

ALL LOCATIONS

Build a people-first content system

Prioritise staff, guests, humour and behind-the-scenes stories; clarify CTAs and distinguish location-specific content.

A phased roadmap designed for realistic execution.

12-month implementation roadmap

A phased plan designed for a regional hospitality business with limited time and resources.

0-3 months

Set the foundations

- Review weak-site operations
- Define 3-4 content pillars
- Assign staff content owners
- Begin consistent weekly posting

3-6 months

Standardise and differentiate

- Clarify Leicester value cues
- Improve Nottingham workflow
- Create location-specific formats
- Track reviews, saves and shares

6-12 months

Scale what works

- Transfer successful practices
- Test local creator collaborations
- Refine pillars using performance
- Compare results with baselines

Proposed measurement framework

These were strategic targets, not post-implementation results.

2 + 2

TikToks and Instagram posts per week

50%

Monthly content featuring staff or guests

+20-25%

Target growth in meaningful engagement

6 → 15+

Average comments per post

3.7 → 4.1

Target Leicester rating within 12 months

From a broad question to an evidence-based action plan.

Project outcome

The project concluded that Peter Pizzeria did not need a costly full rebrand. The stronger route was to reduce location-level experience gaps and build a clearer, more human digital presence.

The work demonstrates my ability to structure ambiguous marketing problems, analyse mixed data, identify commercially relevant patterns and translate findings into priorities, timelines and proposed KPIs.

1

Commercial thinking

Recommendations were adapted to the resources and operational reality of a regional hospitality business.

2

Evidence over assumptions

Platform data, customer reviews, competitors and market research were interpreted together.

3

Clear limitations

The report acknowledged small samples, uneven review volumes and the subjectivity of single-researcher coding.

Academic consultancy project completed for university assessment. Recommendations were proposed; implementation and commercial outcomes were not independently verified.
